Experience

Gridmetry GmbH

Software Developer

Remote

January 2026 – Present

- Onboarded a new mining site by integrating an external energy-market provider API into a Go (Golang) control service, implementing OAuth2 REST communication, event-driven command routing and WebSocket delivery to the on-site agent; added retries, deduplication, crash-safe recovery, Terraform ECS infrastructure and CloudWatch alarms.
- Built an end-to-end energy bidding platform using React.js, Python/FastAPI, and PostgreSQL, delivering an Excel-style interface, REST APIs, and relational data models for bulk bid management, validation and deadline rules, real-time provider submission, and scheduled AWS Lambda/ECS processing.
- Developed data pipelines to analyze wind farm production forecasts and actual generation, quantifying forecast accuracy, bias, revision patterns and production ramps across multiple time horizons; translated the findings into power, ramp-rate and response-duration requirements for flexible data-center deployments.

Software Developer Intern

June 2025 – December 2025

- Developed a client-facing operations dashboard and backend using React.js, Python/FastAPI and PostgreSQL; designed APIs and database tables, implemented role-based access and delivered interactive performance and accounting views.
- Built Python ETL pipelines to ingest pricing, telemetry and third-party data, apply validation and time-series transformations, calculate site-level revenue, taxes, fees and operating costs across multiple resolutions and load results into PostgreSQL; deployed scheduled workloads on AWS Lambda and ECS with CloudWatch monitoring/alerting.

Projects

Attention Router | Python, FastAPI, AI agents, LLMs

[\[GitHub\]](#)

- Built a multimodal AI notification-routing system that classifies messages across 3 modalities - text, images and voice into notify, digest or mute actions using recipient-specific behavioral history and tiered BM25 retrieval.
- Designed a deterministic safety layer to detect phishing, brand impersonation, credential requests and prompt-injection attempts before invoking the language model.
- Engineered a LLM pipeline with schema-validated outputs, citation verification, retry and fallback handling, provider-pluggable model support, FastAPI endpoints, synthetic data generation, and tests in CI.

VercelLite | Node.js, Redis, Docker, AWS, PostgreSQL

[\[GitHub\]](#)

- Developed a deployment platform that builds React applications from GitHub repository URLs in isolated Docker containers and publishes them through hosted URLs with custom-domain support and request analytics.
- Implemented deployment orchestration using Node.js and AWS ECS, Redis Pub/Sub for real-time build logs, and PostgreSQL with Prisma for project and deployment persistence. Created a reverse proxy that routes incoming requests to the correct deployed assets stored in AWS S3.

Technical Skills

Languages: Python, Go, C/C++, TypeScript, JavaScript, SQL

Backend & AI: FastAPI, Node.js, REST APIs, RAG, AI Agents, Prompt Engineering, Multimodal AI, LLMs

Frontend: React.js, Next.js, Tailwind CSS, TanStack React Query

Databases & Infrastructure: PostgreSQL, MongoDB, Redis, Docker, Linux, AWS ECS, ECR, S3, Lambda, CloudWatch, Terraform, GitHub Actions, CI/CD, pytest

Education

Jaypee Institute of Information Technology, Noida

2022 – 2026

B.Tech in Computer Science & Engineering

Achievements

- Code with Cisco 2025 Finalist:** Selected among the top 75 and finished in top 3 projects in the code-a-thon.

Volunteering

Teaching Assistant – 100xDevs Full-Stack Web Development Cohort

Jan 2024 – Sep 2024

- Resolved technical questions and created learning resources covering full-stack development topics.

Core Team Member – Google Developer Student Club, IIIT Noida

Aug 2023 – Jul 2024

- Organized technical events and delivered frontend development workshops.
